

1. Write an X86/64 ALP to reverse a given string and check if it is a palindrome.
2. Write an X86/64 ALP to sort a 64-bit array in ascending/descending order.
3. Write an X86/64 ALP to find the largest or smallest 64-bit number from an array.
4. Write x86 ALP to find the factorial of a given integer number on a command line by
using recursion. Explicit stack manipulation is expected in the code.
5. Write an X86/64 ALP to Remove duplicate elements to create a list of unique values.
